

decided WHICH "CLIMATE MODIFICATION TECHNOLOGIES WOULD BE TRIED" to WARM UP THE EARTH in order to stop a global "cooling trend."

The results of this secret Soviet-U.S. agreement first became evident when the U.S.S.R. started its Tesla transmitters in 1976. Three years later in 1979, the Trilateral-controlled U.S. Government commenced its part of the secret agreement, by turning on 30 Hertz U.S. ELF transmitters.

(The Soviets took advantage of the secret 1974 agreement to use their advanced technology, years ahead of the U.S. transmitters in accuracy, to launch repeated weatherwar attacks directly against the United States.)

The March 29, 1988 NEW YORK TIMES described the successful results of the secret Soviet-Trilateral polar warming agreement, that first became apparent after 1979--when U.S. 30 Hertz ELF transmissions joined forces with the Soviet 10 Hertz ELF signals: "Average global temperatures in the 1980's are THE HIGHEST MEASURED SINCE RELIABLE RECORDS WERE FIRST KEPT, OVER 130 YEARS AGO." The newspaper reported that scientists discovered a "sharp rise" in temperatures in the 1980's.

U.S. - SOVIET ENVIRONMENTAL COLLUSION

More details about U.S. - Soviet joint actions to use ELF waves for world weather engineering appeared in the December 16, 1980 NEW YORK TIMES in an article about the Special Committee on Antarctic Research, an international body with representatives from the U.S.A., U.S.S.R., Communist East Germany, France, Chile and several other Western nations.

The NEW YORK TIMES revealed that the U.S. Government's part of the joint scientific effort was concentrated on GENERATING EXTREMELY LOW FREQUENCY (ELF) ELECTROMAGNETIC WAVES. The newspaper described how ELF can influence the environment many thousands of miles away:

"Scientists in Antarctica believe they have probably created AN AURORA over Quebec. The aurora should have resulted from an experiment conducted...TO INTERFERE WITH THE EARTH'S MAGNETIC FIELD and, the scientists hope, lead to a better understanding of the phenomena that can disrupt long range communication" (just at the Russian Woodpecker signal does).

The newspaper continued, "...In the experiment, scientists 'tickled' the magnetic field with very low frequency radio waves. ...The waves follow magnetic field lines that extend from Antarctica to Canada."

"Electrons forming the earth-encircling radiation belt NORMALLY are trapped in paths that spiral around the magnetic field lines and reverse direction as they near the earth at each end of the magnetic arc. IF THEIR PATHS ARE PERTURBED BY RADIO WAVES, THEY FAIL TO REVERSE AND PLUNGE INTO THE ATMOSPHERE."

The NEW YORK TIMES stated, "Scientists think the radio waves may induce wave motions back and forth along the magnetic field lines. SUCH WAVES COULD BE THOUSANDS OF MILES LONG, almost as long as the field lines themselves." (These waves are directly related to the GIANT STANDING WAVES which are created by Soviet Tesla transmitters. Such waves can be used to ALTER THE FLOW OF THE JET STREAM and ACT AS A WEATHER-BLOCKING-MECHANISM.)

The newspaper continued, "When specific radio frequencies are transmitted, their effects (which can include electron showers, perturbations of the earth's magnetism and disturbances in the radio-reflecting layers of the upper atmosphere) should all oscillate at a tempo matching that of the transmitted signal." These experiments were based directly upon Nikola Tesla's concept of matching resonance in wireless power transmission.

The April 26, 1983 NEW YORK TIMES reported that there are SEVEN separate Soviet scientific stations in Antarctica and U.S. crews frequently join their Soviet and Czechoslovak counterparts. The newspaper described the U.S.S.R.'s Vostok scientific station which was set up in 1957 "because of its proximity to the South Geomagnetic Pole, WHICH MARKS THE AXIS OF THE EARTH'S MAGNETIC FIELD. It is distinct from the magnetic pole, to which compass needles point, and from the geographic pole."

The newspaper reported on an international deep ice-drilling experiment at Vostok, involving U.S. and Soviet scientists. Because of this station's strategic location on the axis of the earth's magnetic field, the real purpose of the Vostok station appears to be the use of Tesla magnifying transmitters as a key part of the polar warming agreement. The deep hole has been described as a part of some versions of the Tesla transmitters.

The December 25, 1984 NEW YORK TIMES reported, "30 Russian scientists, 100 crew members and 16 American participants" were involved jointly in the "Second Soviet-American Expedition in the Bering Sea." The same article described long-time joint U.S.-Soviet work at Antarctica: "For a number of years there was always an American scientist at the main Soviet Antarctic base and a Russian at one of the American bases."

The February 4, 1986 NEW YORK TIMES described ELF generators in Alaska and Norway which appear to be secretly used in close coordination with the Soviet Union's own ELF transmitters for the purpose of carrying out the 1974 polar warming agreement.

The newspaper reported that U.S. scientists in Fairbanks, Alaska are working to "MANIPULATE and ORCHESTRATE AURORA DISPLAYS BY BEAMING POWERFUL RADIO WAVES UP FROM THE GROUND." "Recent tests have also indicated that a related phenomenon, THE POLAR ELECTROJET, 'A RIVER OF ELECTRICITY FLOWING THROUGH THE UPPER ATMOSPHERE,' may have a practical application."

"In Norway, the electrojet has been used to create EXTREME LOW FREQUENCY RADIO WAVES."

The newspaper added, "The demonstration that the auroral electric current, or electrojet, can be used to generate Extreme Low Frequency, or ELF radio waves has been reported in the British journal NATURE."

The NEW YORK TIMES also described the special transmitter in Norway--which is close to the newly discovered HOLE IN THE OZONE LAYER OF THE ATMOSPHERE OVER SPITSBERGEN, NORWAY:

"A station on the ground, IN NORTHERN NORWAY, transmitted extremely powerful high-frequency radio waves into the electrified upper air through which the electrojet flows. This ALTERED THE ELECTRICAL CONDUCTIVITY OF THE AIR, and since heating was intermittent, the electrojet was modulated to generate radio signals at such extremely low frequencies as 1,040 and 1,570 Hertz (cycles per second)."

The November 3, 1987 WASHINGTON POST reported, "The National Oceanic and Atmospheric Administration (NOAA) announced that more than 30 U.S.- Soviet research programs on CLIMATE CHANGES were approved by the two governments" on October 30, 1987.

NEW OZONE TREATY SWINDLE PROMOTES MORE U.S. DEINDUSTRIALIZATION

Acting upon the basis of the GIANT PROPAGANDA LIE, which claims that chlorofluorocarbon (CFC) gases ALONE are the cause of the recent sudden decrease in the earth's ozone level, the Reagan-Trilateral Administration signed the international ozone treaty. On March 14, without opposition, the U.S. Senate approved the ozone treaty.

Unfortunately, the treaty DOES NOTHING WHATSOEVER TO HALT THE REAL CAUSE OF THE SUDDEN DEPLETION OF OZONE. The new ozone treaty grants SPECIAL TREATMENT, to the Soviet Union and Third World nations, that allows them to
